This is a write-up that explains why you wish to enter the Master of IT in Business programme, in what ways you believe you are qualified, and your future career aspirations. After completing my MITB degree, I intend to move in a role where I can be a potential change maker by enabling the team with my prior experience and subject knowledge, thereby utilizing the right statistical methods to make better business decisions, preferably in the Banking and Financial services sector. I have over two years of experience at a data analytics firm, and have worked in projects in Retail, E-commerce, and the Hospitality industry. I have worked on and seen first-hand, the impact that analytical tools and BI deliverables can have in shaping future business decisions for my clients. In my current role as a Senior Business Analyst, I oversee and ensure the execution of daily, weekly and monthly deliverables. My responsibilities include the development of interactive BI reports for decision makers in the client side, along with various ad hoc analysis from time to time. I am proficient in SQL and Advanced Excel, and have experience on SAS Enterprise Guide. My projects involved engaging with various stakeholders ranging from senior statisticians, domain knowledge experts and technology developers. I was able to bridge myself across stakeholders keeping an overall view of the end objective in mind. This helped me gain an understanding of the complete product lifecycle. Such projects were tough but rewarding, and motivated me to move beyond technical skill alone and gain a more holistic approach. I expect a MITB at SMU would provide me the means to be better involved in the root of the business problem, and contribute in more ways than technical skill.
