Personal Statement
_____

This is a write-up that explains why you wish to enter the Master of IT in Business programme, in
what ways you believe you are qualified, and your future career aspirations.
Every Student who is passionate in getting a master's degree would definitely strive in succeeding
that. They are students who really want to achieve something in their functional arena and move
forward in structuring and fulfilling their aims in pursuing Masters, and I am one among them who
wants to grab hold on the best possible opportunity which falls in my way in getting a Master's
Degree. Obtaining First-Class with Distinction in my Bachelor's degree in the field of Computer
Science & Engineering will always be a wonderful moment and something which I would cherish for a
very long time and I am happier and satisfied that it has helped me to grab hold on the fundamental
concepts of Computer Programming with ease and creativity. I had various subjects like Java, Dotnet,
Computer Architecture with SQL and many more. Amongst all, I was very much dragged and attracted
towards SQL and wanted to learn more of its complex query Structure and formation. I attended
various workshops on Cloud Computing, Android App Development and an International Conference on
Communication, Computing and Information Technology. I underwent implant training at Accel Frontline
Ltd and in BSNL during my second year at college which proved really helpful in interacting and
understanding their work culture and pattern and what they really do. My Final year project was an
interesting one. It was titled "Implementation of College Management System Using Blackberry". The
project deals with a Blackberry application which aims at providing good security and user
convenience. The app simplifies the student details and staff schedules in a more efficient manner.
  Apart from my academics, I was very interested in Extra-curricular activities too, my skills at
playing carrom has earned me many prizes in many competitions. I have acquired Vedic knowledge and
learnt Upanishads procedurally and have chanted the same in many occasions. I had been an active
member in organizing and managing a cultural symposium named 'BIOS 2K13' in my college and feel this
would enhance my ability to work as a team. Soon after, I got an opportunity to step into a real
precipitous world, as a Project Trainee at Ramco Systems. Here I got an exposure and opportunity to
learn about SQL Server Management and was a part of the Product Delivery Aviation Team which
supports various Aircraft Maintenance. Ramco Systems has established themselves as one of the finest
Enterprise Resource Planners on Cloud. My responsibility was to solve the defects raised in
accordance to satisfy the Screen development and Customer Specifications. I always believed that I
had the potential to excel in the field of Computer Science and hold a Master's degree. I was very
much inclined in choosing NUS for pursuing my masters as it provides quality education with a good
study atmosphere. Singapore as such is a wonderful place to live with its welcoming and Cultural
Society and has always been an increasingly popular study destination with international students
across the globe. The educational System in SMU is much organized and well standardized with highly
qualified staffs which increase the quality of education. If given an opportunity to be a part of
your prestigious university I would be really grateful and perform my tasks to the greatest of my
abilities.
